

Pan Workflow Flowchart

Colors show which staff profile handles each part of the pan journey.

Lab	Store Staff	Store Manager	Admin Review	Decision / Warning
1. Lab makes pan Pan ID is printed/shown Pan is lab stock	2. Lab dispatches Selected pans move to store	3. Store receives Accept or reject dispatch	4. Store display Choose flavour Use Recommended FIFO pan	
5. Guided swap Old pan empty, too low, or partial	6. If too low App treats old pan as empty	7. EOD weight Enter display kg by flavour	8. Manager correction Fix same-day EOD mistakes	
9. Empty count App count rises when pan is depleted	10. Physical count Staff counts empty pans seen in store	11. Review flags Admin/Manager check mismatch	12. Return empties Store sends empties; Lab accepts/disputes	

Important checks

- Only one active display pan per store and flavour.
- Only one open or partial pan per store and flavour.
- Too low means the app marks the old pan empty.
- If physical empty pans do not match the app count, Admin and Store Manager review it.
- Empty pan return lowers the store app count as soon as the store sends it.
